Better Streets Plan

Plan Elements Engineering Countermeasures

SFMTA

UCSF

San Francisco
Injury Center

November 19, 2010 WALK 21- The Hague, Netherlands

Engineering Countermeasures

- Advance limit lines with high visibility crosswalks
- Center Median improvements
- Sidewalk "bulb-outs"
- Improved Lighting
- Raised Crosswalks
- Pedestrian Countdown Signals (PCS)

SFMTA

UCSF

Sample

Data of three sources yielded:

- 73 AVP incidents
- 62 Intersections

No PCS Present

SFMTA

UCSF

San Francisco Injury Center

Measure: Safety Improvement Index (SII)

$$S = \frac{K(C_f + C_{nf})}{Y} - M$$

$$Q = \left(\frac{A_a - A_b}{A_b} \times \frac{1}{L} \right) \times S$$

$$B = \frac{S + \frac{1}{2}Q}{1.06} + \sum_{i=2}^L \left[\frac{(S + \frac{1}{2}Q) + (i-1)Q}{(1.06)^i} \right]$$

$$SII = \frac{B}{C}$$

SFMTA

UCSF

San Francisco Injury Center

Result: Cost-Beneficial or Not

	SII > 1	SII < 1
Number of Intersections	33	29
Median SII	2.40	0.60
Total Cost of Injury	\$4.65 Million	\$583,590
Total Cost of PCS	\$1.14 Million	\$997,000

SFMTA

UCSF

San Francisco
Injury Center

Results by Intersection

SII	Intersection	SII	Intersection
22.94	FILLMORE & GEARY	0.2	GEARY & VAN NESS
16.43	HAYES & VAN NESS	0.26	GEARY & LAGUNA
14.54	ELLIS & LARKIN	0.3	IRVING & SUNSET
12.74	BRAZIL & MISSION	0.33	MISSION & SILVER
10.52	DIVISADERO & SACRAMENTO	0.38	22ND ST & DOLORES
6.22	BAY & POWELL	0.4	ELLIS & TAYLOR
6.04	22ND ST & GUERRERO	0.4	DOLORES & MARKET

November 19, 2010 WALK 21- The Hague, Netherlands

31

Findings & Implications for Policy

Overall, San Francisco could save **\$2.40** for every **\$1** using PCS at “cost-beneficial” locations

Recommendations:

Use findings to advocate for funding

Consider BCA in prioritizing projects

HEALTH

The Cost of Care

The United States spends more on medical care per person than any country, yet life expectancy is shorter than in most other developed nations and many developing ones. Lack of health insurance is a factor in life span and contributes to an estimated 45,000 deaths a year. Why the high cost? The U.S. has a fee-for-service system—paying medical providers piecemeal for appointments, surgery, and the like. That can lead to unneeded treatment that doesn't reliably improve a patient's health. Says Gerard Anderson, a professor at Johns Hopkins Bloomberg School of Public Health who studies health insurance worldwide, "More care does not necessarily mean better care." —Michelle Andrews

Pedestrian Countdown Signals

Countdown Signals Program

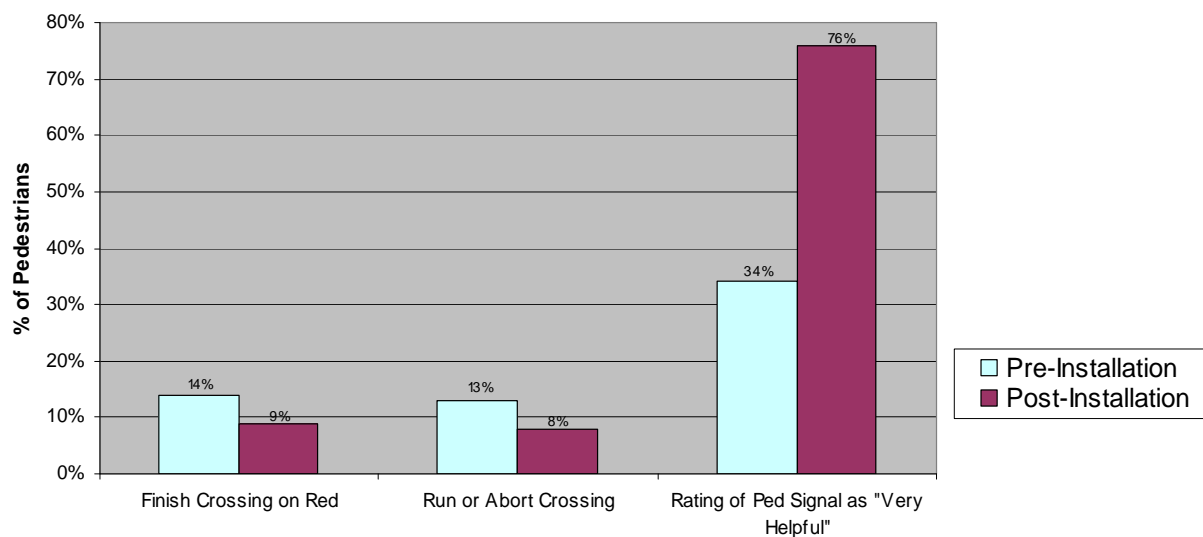

- Pilot - Countdown signals initially installed at 14 test locations
- Full-scale Replacement - City eventually replaced most pedestrian signals with Countdown Signals (over 800 intersections)
- More energy-efficient: electricity savings paying for LED device installation (over several years)

Countdown Signals

Summary of Impacts :

- Pedestrians like additional information on how much time is left to cross the street
- Citywide installation – about 22% drop in injuries at countdown locations vs. 2% rise at signalized intersections without pedestrian signals
- Significant reduction in pedestrians finishing crossing on red
- No significant reduction Pedestrians starting to cross at the beginning of the clearance interval
- No increase in red light running

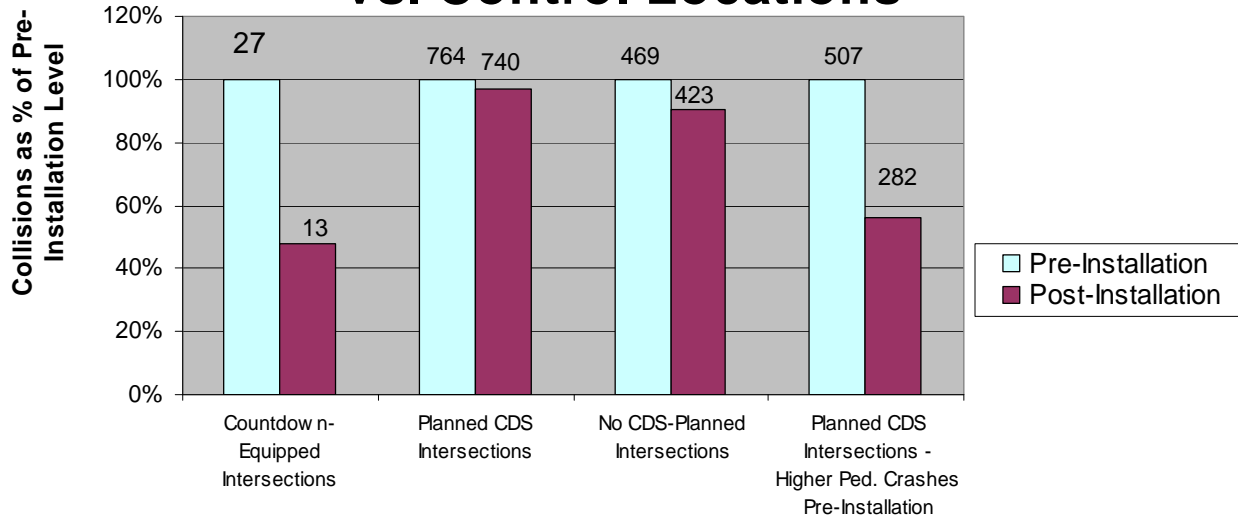

Countdown Behavioral Impacts

Note: All differences statistically significant, $p < 0.01$

Collision Impacts

Pilot Countdown Locations vs. Control Locations

Note: Countdown reduction statistically significant, $p < 0.05$

Recommend Collaboration
